The story
Are scientists wrong about the so-called 'love hormone'?

Decades of research suggests the chemical called oxytocin is linked to love and friendship.

But a new study says this hormone might not be necessary for social relationships after all.

Key words and phrases

upend
upset or change completely
- Those scientific results have upended all our theories.
- The court's decision upended the way we understand the law.

overrated
thought of as better than it actually is
- I know you like that band, but I think they're really overrated. I don't think they're very good.
- Tea is overrated. I much prefer coffee.

not so fast
stop and reconsider
- Not so fast! You don't have enough evidence to make that accusation.
- Not so fast! You're not going home until this is done.
