

## MAKE YOUR OWN 3D GLASSES

- what you need:**
- Red and cyan (a type of blue) cellophane, available from most art and craft stores, party supply shops or various online suppliers
  - Paper or cardboard
  - Scissors

**what to do:** Print and cut out the template below. You may need to cut out the eye holes a little closer to the centre, depending on how they fit. If you want to make a sturdy pair of glasses, just paste the print-out onto some cardboard and cut out from there.

**SAFETY:** Children may need an adult to help them cut the templates out.

Cut out some rectangles of red and cyan cellophane, large enough to fit over the eye holes with room to glue around the edges. Be careful to keep the viewing area of your cellophane clear of any glue or creasing. Glue the **red** cellophane over the **left** eye and the **cyan** cellophane over the **right** eye. Finally, glue on the side panels to complete your very own 3D glasses.
