

Scientists in England and Spain have developed an inexpensive test which they believe could be used to **detect** the early stages of **pancreatic cancer**.

The test checks for three proteins in the **urine** and has proved more than 90% accurate so far.

Vocabulary

detect

find something that is hidden

pancreatic cancer

a cancer of the pancreas: an organ that helps you digest food

urine

waste liquid passed from a human or animal's body

Choose the correct summary

- a) The new test can help people who have not yet developed pancreatic cancer.
- b) The new test can find signs of pancreatic cancer before the disease is very advanced.
- c) The new test can help 90% of people who have developed pancreatic cancer.

Answer

- b) The new test can find signs of pancreatic cancer before the disease is very advanced.
